Reference to the Services Delivered

Since 2018, IFC has worked in Mariupol on a project of Transport model development and public transport optimization.

A+S Ukraine was hired as part of the project. A+S Ukraine participated in the collection of passenger traffic flow data for all types of passenger transport & conducted research for several routes using On-Board Survey methods.

A+S Ukraine developed the first scaled, multimodal transport model for Mariupol utilizing PTV technology. The multimodal transport model made it possible to calculate different public transport scenarios thus providing insights into the economic viability for different options.
